

Multi-factor authentication (MFA)

My security credentials Root user Info

The root user has access to all AWS resources in this account, and we recommend following [best practices](#). To learn more about the types of AWS credentials and how they're used, see [AWS Security Credentials](#) in AWS General Reference

 **You don't have MFA assigned**
As a security best practice, we recommend you assign MFA.

Assign MFA

Account details

Edit account name, email, and password

- Step 1
- ☒ **Select MFA device**
- Step 2
- ☐ Set up device

Select MFA device Info

MFA device name
Device name
This name will be used within the identifying ARN for this device.

Maximum 64 characters. Use alphanumeric and '+', '.', '@', '-' characters.

MFA device
Device options
In addition to username and password, you will use this device to authenticate into your account.

☐

**Passkey or security key**
Authenticate using your fingerprint, face, or screen lock. Create a passkey on this device or use another device, like a FIDO2 security key.

☒

**Authenticator app**
Authenticate using a code generated by an app installed on your mobile device or computer.

☐

**Hardware TOTP token**
Authenticate using a code generated by Hardware TOTP token or other hardware devices.

agement

 **MFA device assigned**
You can register up to 8 MFA devices of any combination of the currently supported MFA types with your AWS account root and IAM user. With multiple MFA devices, you only need one MFA device to sign in to the AWS console or create a session through the AWS CLI with that user.
